

# XMailer

*The Complete E-mailing Solution*

Looking for a reporting solution that e-mails reports to the people who need them?

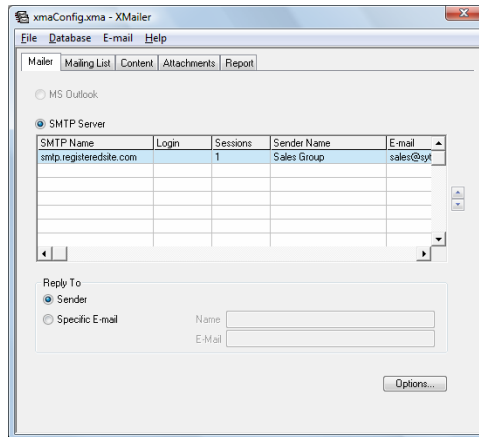

Look no further than XMailer!

XMailer sends the right report to the right person at the right time!

## Email Reports Automatically

**XMailer** is a delivery system that automatically distributes reports by email, periodically or on an event. The software provides all the tools needed to configure and send a complete e-mail.

**XMailer** contains all the features you would expect from an e-mailing program such as mail merging, broadcasting, database support, dynamic attachments, configurable signatures and management tools.

*Complete e-mail configuration with XMailer.*

## Why Automate Emailing?

With automated e-mailing, there is no human intervention, saving time and increasing productivity.

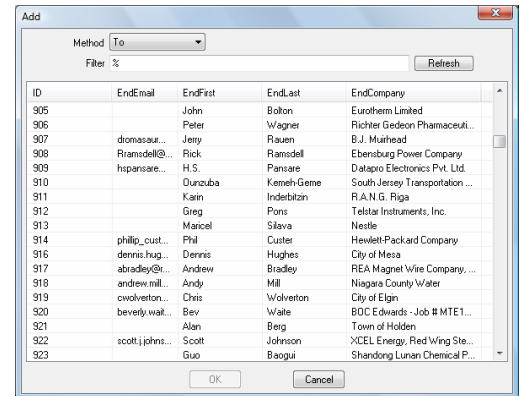

You also get the right report to the right person at the right time. Having reports sent to people in a timely manner ensures that informative decisions are based on the most current information.

## Go One Step Further

**XMailer** goes beyond automated e-mailing. It can be fully integrated into your HMI display and used on demand. You set up e-mail templates that operators send with the push of a button.

## Database Support

Don't reinvent the wheel! **XMailer** can either use manually entered addresses or utilize those stored in your database.

Address verification, integrity checks, database write back and summary reports ensure the successful deliver of your e-mail message.

SyTech, "The Report Company", develops software for reporting and database management systems.
