

XWeb Director

Complete Web Site Management

Thinking of web enabling your reports but don't have the time for custom programming or learning a new technology? XWeb Director is for you! XWeb Director automatically generates web sites from web-enabled reports, giving everyone in your organization easy access to every report.

Complete Web Management

The power to automate web site creation and maintenance is finally at your fingertips. **XWeb Director** provides a solution that generates an entire web site from your web-enabled reports.

A complete web site for web enabled reports.

It lets anyone select and view reports from the web site's automatically generated home page. Every report is available for immediate viewing with just a web browser.

XWeb Director allows you to conveniently share the most recent production numbers between the plant floor, the engineering department, the front office and, if required, the outside world.

Information is the Key

Generating lots of data is easy, but the key to profitable business is getting the right information in front of the right people so that they can make informative decisions. **XWeb Director** makes information available automatically, *on time, every time.*

Access from Anywhere

XWeb Director does not require a web server. The web site it creates can be generated and maintained on a local file server and is accessible by anybody with access to that server.

However, if a more global distribution is required, the web site can be produced on a company intranet, as well as on the Internet.

Flexible Setup

XWeb Director's Designer makes setup completely flexible. Both traditional non-framed web page styles and framed web page styles are supported for your web site.

XWeb Director is designed to produce web sites based on templates that are totally customizable by you. You can design a template using any editor such as Microsoft Front Page or Microsoft Word. Alternatively, you can take one of the templates provided, reconfigure it with your company's logos and other pertinent information and let **XWeb Director** do the rest. The power is truly in your hands!

SyTech, "The Report Company", develops software for reporting and database management systems.
